

2. If you take the tube and **KSD-G2** off together, then, after lubricating your head and shaft through the vent holes, hold onto the tube and begin to work your shaft from under the **KSD-G2**. Begin to work the **KSD-G2** and tube toward the head very gently. While going forward toward the head, pull the skin backward from under the **KSD-G2** very gently.

Once at the head, very carefully work the skin of the head under the **KSD-G2**. This whole process normally takes less than one minute, with no pain or discomfort.

3. If your KH is present, honor her by making sure that you give her the CB-2000, CB-3000 or The Curve plus all the accessories (lock, cuff ring, spacer(s), locking pin) and the **KSD-G2**. She owns them like she owns you. Now, do whatever she says!

#### Tips

1. Effective chastity is a combination of proper cuff ring, spacer, and **KSD-G2**. Use the tightest cuff ring that does not cause chaffing/swelling and the smallest spacer that does not allow the tube to pull too close to the scrotum causing blood stoppage and swelling.

When you have the right combination of the three, you will be very secure for your KH. Some men complain about the ring pulling against their scrotum during arousals. That is to be expected and after a while you will get used to it. Male chastity is about your KH receiving the honor, respect, and assurance of your faithfulness that she deserves!

2. If you find that your **KSD-G2** is so tight that you have difficulty urinating, here's what to do. Take some 80 grit sandpaper and take off just a bit from the inside hole. Take off enough plastic dust to just cover the face of

a dime very lightly. Don't take off too much. If possible, do this under your KH's supervision. If you can urinate properly, the KSD-G2 is not too tight.

After you have altered it to where it is not too tight but you are secure, you might smooth it out the inside a bit with some 120-grit and then some 400-grit sandpaper.

The **KSD-G2** is meant to be tight but not so tight to where you cannot urinate properly. As mentioned before, if you can urinate properly, it is not too tight.

#### How to best stay clean and odor free

On our website we sell cleaning swabs and two different plastic bottles that will help you stay clean for long periods of lockup. One is a 4 oz. bottle with a flip-top cap. You can take this to work with you. It is small enough to fit in your pants pocket when you go to the restroom. When you use the rest room, just put water in it and squirt it up the end of the tube to flush out any remaining urine.

We also have the 250 ml squirt bottle with the rigid angled head. You can use our Cleaning Swabs and put soap on them and clean the inside of the tube and your shaft/head or you can fill the squirt bottle with warm water then squirt in some shower gel. Shake it up to mix it. Then carefully squirt the soapy solution under the **KSD-G2**, up inside the tube, and in the vent holes until you feel that you got the majority of yourself clean. Use good pressure on the bottle and you can squirt the fluid from the back of the **KSD-G2** to the very front of the tube. Now, clean out the bottle and fill it with clear, warm water and do the same thing again, flushing out the soapy mixture. Then to get dry you might take a hairdryer and blow-dry yourself or take some Q-tips and swab out the moisture.

You will find that you will be clean for a good long time, free of odors from under the tube and the **KSD-G2**.

# KEEPSAKE SECURITY DEVICE GENERATION 2

Patent Pending

The Ultimate Security  
Device for the CB-2000,  
CB-3000 and The Curve

Kept For Her

[www.keptforher.com](http://www.keptforher.com)  
E-mail: [info@keptforher.com](mailto:info@keptforher.com)

Congratulations on your purchase of the **Keepsake Security Device Generation 2 (KSD-G2)**. By wearing the **KSD-G2**, you are assuring your KH of your commitment to your relationship, your chastity, and her total satisfaction and pleasure!

### CAUTIONS:

1. **Do not put the KSD-G2 on by itself.** Put it in the tube that you use and put them on together.
2. **Never leave the KSD-G2 on the shaft by itself.** It is not meant to be an erection ring. You might cause great harm to yourself if you leave the **KSD-G2** on your shaft without the tube on.
3. **This is not a medically approved device.** You wear it at your own risk. Use good judgment!
4. **Do not let the wearer be without access to a key for the first 2-3 days** to make sure that there is no swelling or other discomfort.

### **READ ALL INSTRUCTIONS BEFORE PUTTING THE KSD-G2 ON!!**

#### PUTTING THE KSD-G2 ON

1. Put on your normal cuff ring and locking pin. Make sure you have a nice tight fit (see Tips on back page). You might have to use a different locking pin/spacer to compensate for the extra 1/4" that the **KSD-G2** will take up.
2. Take the **KSD-G2** and place it into the CB-2000, CB-3000 or Curve tube, lining up the locking pin holes. Use a personal lube similar to KY Jelly, Wet, Astro Lube, Equate

or other water-based lubricants to lubricate the head and shaft. Then, work your head through the entrance of the **KSD-G2** with your finger, then use a Q-tip to push the head and shaft down the tube through the vent holes.

You might need to take the Q-tip and push your head and shaft through the **KSD-G2** then work the Q-tip through the vent holes, alternating as you go. You will get very good at this, it's easy! This whole process should only take about 3 minutes after you are used to doing it.

3. Align the alignment posts of the tube with the cuff ring alignment pin holes and the locking pin with the locking pin hole in the **KSD-G2** and tube and carefully slide the tube and the cuff ring together, avoiding pinching excess skin.

**CAUTION— as you are sliding the tube toward the cuff ring, be careful that you do not pinch excess skin.** Also, if you use the CB-3000, make sure that the opening at the end of your penis is lined up with the opening in the end of the tube. If you are not lined up, in an aroused state you may have difficulty urinating.

4. Now that you are ready to be locked up, put your lock through the locking pin hole and let your KH lock you up. Go to Tip #3 for ideas on getting cleaned up. You want to have no lubricant on your shaft or under the **KSD-G2**.

5. Monitor your condition carefully for the next few days. **Do not let the wearer be without access to a key for the first 2-3 days to be assured of proper fit.**

**Note:** If after wearing the **KSD-G2** you find that you can get out, you ordered the wrong size. Contact us at [info@keptforher.com](mailto:info@keptforher.com). When measured and fit correctly and you have a good combination of cuff ring and spacer (see Tips on back page), you will not get out easily nor will you have any undue discomfort.

**CAUTION:** If you have any discomfort that

persists, take off the **KSD-G2** and contact us immediately. We are good about monitoring our e-mail. Just take great care when putting the **KSD-G2** on and taking it off. The penis is very fragile!!!

**NOTE:** One question that arises is that of urinating when in an aroused state, particularly early in the morning. Here's what to do. While sitting down on the toilet, pull out on the tube by holding onto the lock, sort of straightening your shaft out. Relax and use some pressure at the same time in order to move liquid out of your body. As you begin to urinate, you will find that the rest comes out very well.

If your **KSD-G2** is too tight and you find it too difficult to urinate, take it off immediately and use some sandpaper (See item #2 under "Tips") to open up the hole of the **KSD-G2**. Just shave off enough plastic dust to cover the face of a dime.

#### GETTING THE KSD-G2 OFF

**CAUTION: DO NOT LEAVE THE KSD-G2 ON AFTER YOU TAKE OFF THE TUBE!!! DO NOT USE IT AS AN ERECTION ENHANCER!!! WHEN YOU TAKE OFF THE TUBE, TAKE OFF THE KSD-G2!!!**

1. After your KH unlocks you, separate the tube from the **KSD-G2**. Take off the tube. Put some lubricant on a Q-tip.. Now, work the Q-tip under the **KSD-G2** and lubricate the shaft and head with a personal lubricant.. Work the **KSD-G2** toward the head. Once at the head, carefully work the head under the **KSD-G2** by holding onto the **KSD-G2** and pulling skin from under it toward the body and moving the **KSD-G2** toward the head.
